Security Advisory

GHOST Vulnerability (CVE-2015-0235)

Details

OpenText is aware of and has been carefully monitoring the recent news surrounding the GHOST vulnerability. GHOST is a 'buffer overflow' bug affecting the Linux glibc library.

In an effort to help reduce the risk to our customers, OpenText has proactively reviewed its internal systems to assess the potential impact of the issue described in **CVE-2015-0235**. Once we complete our technical risk assessment of our inventoried assets, vulnerable OpenText systems will be remediated through available patches.

At OpenText, we are committed to upholding our obligations regarding the security and privacy of our customers' information. As such, we will continue to evaluate our software products and take necessary action to reduce any potential risks associated with the GHOST bug.
